

Measure at the Right Moment

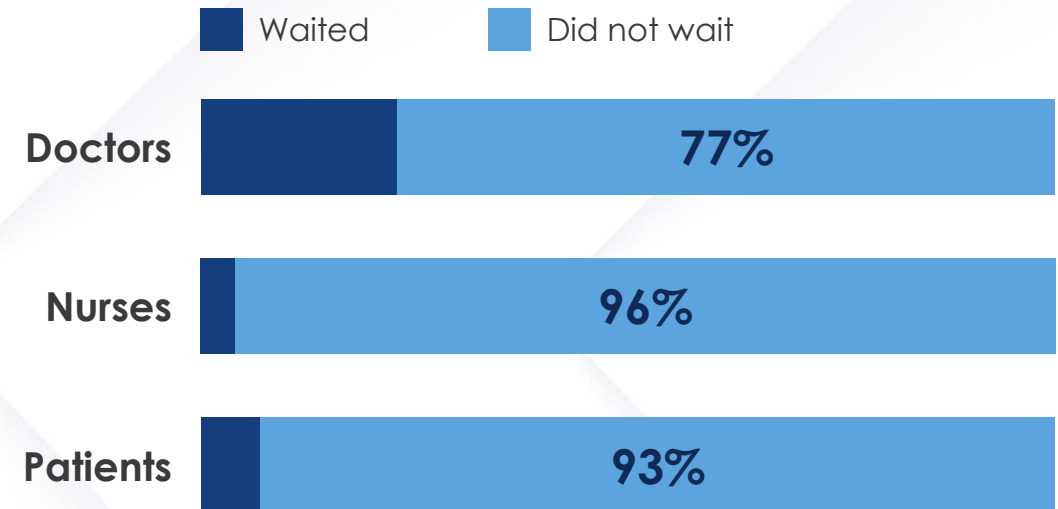

The readiness layer for blood pressure — software on a chip,
inside every device.

The Guidelines Are Ignored

What the guidelines require

- ✓ Relax & sit for at least 5 minutes
- ✓ No talking during the assessment
- ✓ Take repeated measurements
- ✓ Average the readings

But in practice, almost nobody waits

Under-diagnosis

Untreated hypertension — stroke, heart attack, death.

Over-diagnosis

A lifetime of unnecessary medication and medical harm.

“The problem of under- and over-diagnosis is massive.”

— Peter Doran, Prof of Clinical Trials at the UCD School of Medicine

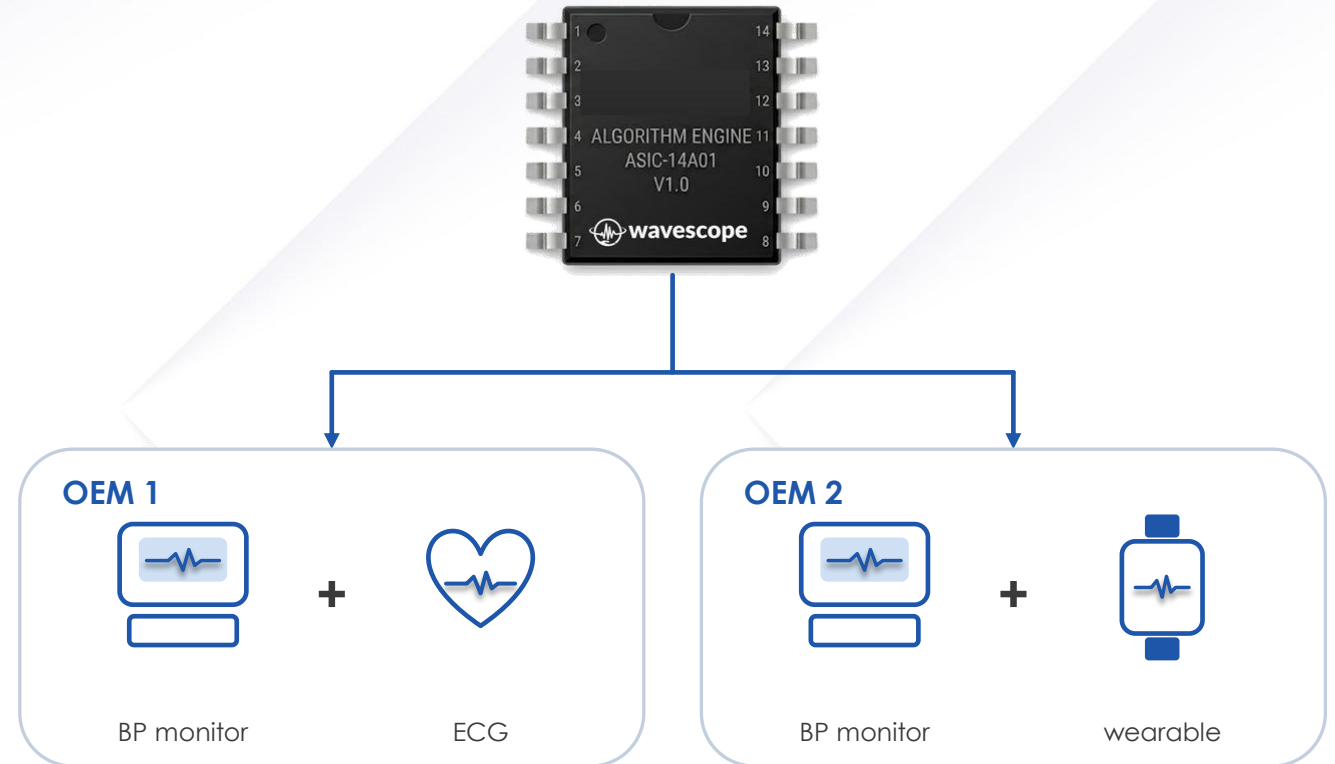

THE SOLUTION

Software on silicon

A patented measurement readiness algorithm, licensed as a chip to blood-pressure monitor OEMs.

- ✓ Detects when the patient is ready
- ✓ A patented algorithm, on a chip
- ✓ Works with multiple sensors — OEMs specialise or diversify
- ✓ Asset-light — we license, not manufacture

Asset-light — and fast to market

OEM licensing economics

90 million home BP devices sold per year — licensed across the OEM vertical.

Economics Model	Year 3	Year 4	Year 5
Projected Volume	100k	1,000k	5,000k
Unit License Price	€1.00	€1.00	€1.00
Unit Cost of Goods Sold	€0.60	€0.45	€0.20
Gross Profit Margin	40%	55%	80%
Total Revenue	€100,000	€1,000,000	€5,000,000

Volumes scale to **5M units by Year 5** — driving an **80% gross margin**.

Speed to market

DTIF funds clinical, IP and regulatory in parallel — a fast path to first revenue in Year 3.

Regulatory & reimbursement

A de-risked, reimbursable path to market in both the US and EU.

Regulatory

FDA 510(k) clearance first, then CE marking (Class IIa).

510(k) under 21 CFR 870.1130 — Class II, product code DXN. Non-invasive blood-pressure measurement system.

Reimbursement

Clinics bill for setup and monthly analysis — a funded care pathway.

CPT 99473 / 99474 and 99453–99458. Supports MIPS Quality 236.

Operators, clinicians & builders

Alan Gormley
Chief Commercial Officer

- Innovator, influencer, strategist, expert in global standards and product commercialization.
- Experienced business leader and excellent background in startups.

Sean McMahon
CEO & Founder

- Innovative engineer (MSc, MEng, BEng) developing high precision devices in the medical, telecommunications and automotive sectors.
- Led a medical neural network AI research project with the Nimbus Research Centre.

Dr. Jennifer Grant
Chief Medical Officer

- Qualified Doctor & Pharmacist, Practicing GP and Clinical Lead at Beacon Health Check.
- Over 20 years experience in medicine and the pharmaceutical industry.
- Invested in preventative health care and empowering patients.

James Sheil
Head of Design

- 20 years experience in Digital Product, Human Factors, Usability, and UX Design.
- Head of Product Design for award winning SaaS enterprise platform.
- Managed design for multiple start-ups and not-for-profits.

Raising €2.25M seed to reach market

€2.25M

total round

€1.0M

non-dilutive government funding (DTIF)

Completes two clinical investigations, publishes our results, updates our patents, and packages the BP Readiness IP as a licensable chip for the BP OEM sector.

01

Correlation study

Acquire state-of-the-art medical equipment; recruit and conduct the study.

02

Clinical investigation

Interventional study — physical & psychological interventions, assess performance.

03

Regulatory

File FDA 510(k). File EU MDR submission.

04

Intellectual property

Secure & protect IP; publish results; fabricate the chip.

THANK YOU

Let's measure at the right moment.

The readiness layer for blood pressure — software on a chip, licensed to every BP OEM.

€2.25M round open · €1M non-dilutive
